

FOR IMMEDIATE RELEASE

Actia Launches Endomotor Endoscope

Dearborn, Michigan - Actia offers the Endomotor® to quickly verify diagnosis of hidden parts. The Endomotor's flexible cable and different optical lenses allow you to see the inside of an engine or the dashboard interior without heavy dismantling. The image appears on your computer screen - in color -- with a simple USB port connection.

Within minutes, you can be checking piston and cylinder surfaces. Simply install the software from the supplied CD-ROM onto your computer. Then select one of the three optical nozzles included - wide angle, axial or 90° angle. The flexible cable has an embedded CCD camera. The image from the camera is displayed on your computer screen.

Endomotor® includes the flexible cable and embedded camera, 3 optical nozzles, USB cable, CD-ROM of software and a rugged storage case. A 120° angle optical nozzle is also available.

Minimum PC configuration required: 256 MB of RAM, available 1.1 or 2.0 USB port, 10 MB available on your hard disc, Windows® 2000 or XP operating system.

ACTIA is a global supplier to the commercial vehicle and automotive markets with products and engineering services focused on vehicle communication interfaces, shop equipment and vehicle diagnostics. ACTIA has extensive experience in the integration of vehicle electronics and service technologies. Our ability to understand the whole vehicle ensures that our solutions are practical, efficient, and cost effective, while at the same time maximizing vehicle serviceability. As a partner of the major OEMs worldwide, ACTIA provides an extensive expertise in product design and validation, software development, manufacturing, final product assembly and tests.

Thinking Globally....Acting Locally!
